Overview: The Durbin Model "V" control valve is engineered to provide linear control of pressures and/or temperatures while maintaining high energy efficiency and providing a long service life.

Materials of Construction: The Model "V" valve's wetted components are made entirely from corrosion-resistant materials. The valve body, actuating stem and seat are all constructed from stainless steel. The valve seal is made from a durable thermoplastic that withstands high temperatures and extreme process conditions. Packing consists of a strong PTFE material.

Application: The Model "V" is great for applications where a broad range of control is important but a stable steady state is critical. The linear flow characteristics provide a predictable flow profile which allows the user to accurately control and predict size requirements
